

February 6, 2020

American Mobile Home Plaza  
 4400 Broad Street Extension  
 Sumter, SC 29154

Dear Resident:

South Carolina Department of Health and Environmental Control (SC DHEC) recently conducted an inspection and water sampling on the six water wells in American Mobile Home Plaza

In this packet you will find:

1. **Sanitary Survey Inspection Report:** A Sanitary Survey is an onsite review and inspection of an entire water system, including the water source, facilities, equipment, operation and maintenance. The overall rating for this inspection was **Unsatisfactory**.
2. **Sampling Results:** The Department conducted both compliance sampling and non-compliance sampling. Compliance sampling results are compared to Maximum Contaminant Levels (MCLs), which are standards set by U.S. EPA for drinking water. Non-compliance sampling results do not have a standard and are not regulated by U.S. EPA or SC DHEC.

**All compliance sampling results for American Mobile Home Plaza are in compliance with MCLs and meet all regulated drinking water standards.**

**Sampling for PFOA and PFOS, which is non-compliance sampling, and thus not regulated, was found to be above the EPA's Lifetime Health Advisory (LHA) of 70 parts per trillion (ppt).** When both PFOA and PFOS are found in drinking water, the combined concentrations of PFOA and PFOS should be compared to the 70 ppt LHA. **Please Note: Advisories are non-enforceable and non-regulatory.**

American Mobile Home Plaza PFOA and PFOS Results	January 16, 2020	January 28, 2020
Well 1 - PFOA	65 ppt	67 ppt
Well 1 - PFOS	170 ppt**	170 ppt**
Well 2 - PFOA	59 ppt	67 ppt
Well 2 - PFOS	180 ppt**	210 ppt**
Well 3 - PFOA	45 ppt	52 ppt
Well 3 - PFOS	160 ppt**	180 ppt**
Well 4 - PFOA	34 ppt	41 ppt
Well 4 - PFOS	120 ppt**	140 ppt**
Well 5 - PFOA	57 ppt	56 ppt
Well 5 - PFOS	190 ppt**	210 ppt**

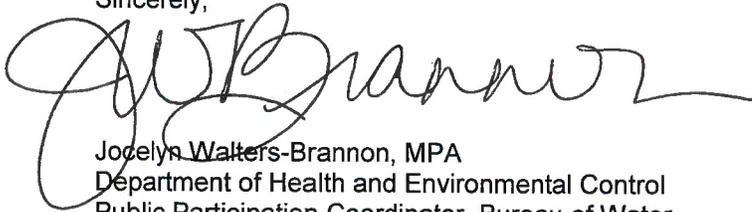

American Mobile Home Plaza PFOA and PFOS Results	January 16, 2020	January 28, 2020
Well 6 - PFOA	29 ppt	30 ppt
Well 6 - PFOS	110 ppt**	130 ppt**

\*\* Indicates sample result above EPA LHA

- 3. Info Sheet on Per – and Polyfluoroalkyl Substance (PFAS):** This information is included for you so you can learn more about these substances as you make decisions about your drinking water.

If you have any questions about the information included here, please contact myself (contact info below) or the SC DHEC Regional Office in Sumter at (803) 778-6548. If you have questions for Shaw Air Force Base please contact Ben Roope at (843) 963-4020 or at [benjamin.roope.2@us.af.mil](mailto:benjamin.roope.2@us.af.mil)

Sincerely,

Jocelyn Waters-Brannon, MPA

February 4, 2020

Mr. Tony Weimer  
131 Derby Dr.  
West Columbia, SC 29170

Re: Sanitary Survey  
American MHP (DHEC#4360012)

Dear Mr. Weimer:

The sanitary survey that was conducted on the American MHP water system on January 16-17, 2020 is enclosed. Thank you for your assistance and cooperation during the inspection.

The American Mobile Home Park is a Community (Type C) water system. There are a total of 70 connections that provide water to a population of 173 people. Water is provided by six wells. Well One, located near Lot #1 is a 2-inch diameter, 60 foot deep well with a 1 horsepower jet pump. Well Two, located near Lot #26, is a 2-inch diameter, 60 foot deep well with a 1 horsepower jet pump. Well Three, located near Lot #76, is a 2-inch diameter, 60 foot deep well with a 1/2 horsepower jet pump. Well Four, located near Lot #38, is a 2-inch diameter, 60 foot deep well with a 3/4 horsepower jet pump. Well Five, located near Lot #63, is a 2-inch diameter, 60 foot deep well with a 3/4 horsepower jet pump. Well Six, located near Lot #67, is a 2-inch diameter, 60 foot deep well with a 3/4 horsepower jet pump. There are 6 bladder tanks that provide approximately 400 gallons of storage. No treatment is provided.

When evaluated according to the State Primary Drinking Water Regulations (SPDWR), the American Mobile Home Park system is rated "Unsatisfactory". A follow up inspection will be conducted in March 2020, to check on progress in the following areas:

1. Item #1 Protection from Contamination – "Unsatisfactory"  
Well casings of Well #2, Well #3, Well #4, Well #5 and Well #6 did not have proper sanitary seals. All of the casings of the wells must be sealed. All openings in the seal must be properly protected (caulked) to prevent contaminants from entering the wells.
2. Item #3 Security – "Needs Improvement"  
Well #1 needs to be secured to prevent tampering or vandalism. This may be accomplished by placing a lockable house or cover over the well.
3. Item #4 Wellhead Piping – "Needs Improvement"  
The sample taps at each well must be pointed downward. Each sample tap must be easily accessible and allow sample collection in different types and sizes of containers. All electrical wiring must be enclosed in conduit.
4. Item #35 facility Maintenance – "Needs Improvement"  
Clear access to all wells and storage tanks must be provided. Areas around the wells and storage tanks must be free of clutter. All insulation around the wells needs to be replaced.

Please e-mail [brownpr@dhec.sc.gov](mailto:brownpr@dhec.sc.gov) or call (843)661-4825 if you have any questions or need assistance.

Sincerely,

A handwritten signature in blue ink that reads "Paula R. Brown". The signature is written in a cursive style.

## Per- and Polyfluoroalkyl Substances (PFAS)

### What are per- and polyfluoroalkyl substances (PFAS)?

Per- and polyfluoroalkyl substances (PFAS) are a large group of man-made chemicals that have been used worldwide in consumer products and in some industrial applications. They've been in use in the United States since the 1940s. PFAS chemicals are used to make products that resist heat, oil, stains, grease and water. The two most commonly produced and most studied PFAS chemicals are **perfluorooctanoic acid (PFOA)** and **perfluorooctane sulfonic acid (PFOS)**.

### PFAS chemicals:

- Do not occur naturally yet are widespread in the environment because of their broad uses
- Are found in people, wildlife and fish world-wide
- Are stable and do not break down easily in the environment (they are persistent)
- Can build up in biological tissues (people, wildlife, fish) over time if exposure continues (they bioaccumulate)

### Are PFAS chemicals harmful?

Human health effects from PFAS exposure are not completely understood. Studies have shown that long-term (lifetime) exposure to some PFAS chemicals may affect developmental stages (growth, learning, behavior) of infants and older children, lower a woman's chance of getting pregnant, disrupt the body's hormones, increase cholesterol, and may increase cancer risk. In 2016, the U.S. Environmental Protection Agency (EPA) issued a Lifetime Health Advisory for PFOA and PFOS in drinking water.

### What is a Lifetime Health Advisory?

A Lifetime Health Advisory (LHA) is just that - an advisory. The LHA was established based on epidemiological studies. These studies indicate that exposure to PFOA and PFOS (the two most common PFAS chemicals) over certain levels may result in adverse health effects. The LHA for PFOA and/or PFOS is 70 parts per trillion (ppt). This LHA is protective of everyone, including

### How can I be exposed to PFAS?

The most common exposure route is from swallowing food or water that contains PFAS. PFAS have been commonly used in the manufacturing of:

- nonstick cookware
- food packaging (ex: microwave popcorn bags, fast food wrappers, sliced cheese wrappers, pizza boxes)
- stain-resistant carpets and fabrics and water-resistant clothing
- paints, varnishes and sealants
- cosmetics
- dental floss
- fire-fighting foams

Exposure to PFAS chemicals via touching, contact with the skin, and inhalation are lesser human health concerns at this time.

pregnant and nursing women, young children and the elderly. Currently, the EPA has not set health advisory levels for the other PFAS chemicals.

A LHA is not a primary drinking water standard (also called a Maximum Contaminant Level, or MCL) under the Safe Drinking Water Act. **A LHA is not an enforceable regulatory standard.** Currently, EPA is evaluating whether an enforceable MCL for PFOA, PFOS or any other PFAS chemical should be developed.

### How do PFAS chemicals get into drinking water?

PFAS chemicals can get into drinking water when products containing them are used or spilled onto the ground or into lakes and rivers. PFAS move easily through the ground, getting into groundwater that is used for some water supplies or for private drinking water wells. When spilled into lakes or rivers used as sources of drinking water, they can get into drinking water supplies. PFAS in the air can also end up in rivers and lakes used for drinking water.

### What is DHEC doing about PFAS chemicals?

DHEC has developed a strategy for addressing PFAS chemicals in drinking water. DHEC's PFAS in Drinking Water strategy focuses on community water systems and on private wells that are located in areas that are potentially impacted by PFAS contamination. Sampling and analyses will begin in early 2020.

DHEC will also develop a strategy regarding PFAS in ambient surface waters (lakes, rivers, streams), including the assessment of fish tissue quality as a protective public health measure for fish consumption by our residents. The ambient water strategy is expected to be completed by mid-2020.

### How can I reduce my exposure to PFAS?

Ingestion (swallowing) of food or water containing PFAS is the most common route of exposure. Because PFAS are present in so many different consumer products and throughout our environment, exposure to PFAS cannot be eliminated. However, some steps can be taken to reduce your exposure:

- Read consumer product labels and avoid using products with PFAS.
- Use an alternative or treated water source for drinking, food preparation, brushing teeth or preparing infant formula if your drinking water contains more than 70 ppt of total PFOA and PFOS.
  - Activated carbon filtration or reverse osmosis membranes effectively reduce PFOA and PFAS in drinking water.

Water with a PFAS level greater than the LHA can be used for bathing, showering, washing clothes and cleaning.

For more information, visit DHEC's webpage at [www.scdhec.gov/PFAS](http://www.scdhec.gov/PFAS) or other resources below.

Surrogate	Run 1		Run 2	
	Q	% Recovery	Q	% Recovery
13C2_PFHxA	101	70-130	110	70-130
13C3-HFPO-DA	91	50-150	99	50-150
13C6_PFDA	107	70-130	103	70-130
d5-EtFOSAA	93	70-130	95	70-130

LOQ = Limit of Quantitation      B = Detected in the method blank      E = Quantitation of compound exceeded the calibration range      DL = Detection Limit  
 ND = Not detected at or above the DL      N = Recovery is out of criteria      P = The RPD between two GC columns exceeds 40%      J = Estimated result < LOQ and ≥ DL  
 H = Out of holding time      W = Reported on wet weight basis
